

SHOWER POWER BOOSTER

You should always consider water supply to extensions, loft conversions, HMOs, baths and showers. If you are short of water or you need to do more for less a micro-pump offers the perfect solution. Inspired by Victorian engineering, Alan Wright invented a pump in 2010 which gives the same results as pumps over 20 times bigger. It is now loved by its customers and voted the most popular pump in the UK.

The **ShowerPowerBooster** range solves pressure and flow problems in unvented systems (Megaflows), Combi Boilers, Electric Showers, and in vented tank systems. Whilst our SPBs solve any pressure problem in any potable water system, our Radiator Flow Boosters make any lazy radiator run hot. It is the only pump which is designed to operate at a sustained pressure of 4 bars, can withstand 20 bars, and also operates on the hot side of all pressurised systems.

SHOWER POWER BOOSTER

Business focus

The original content and wording on this page has been written and provided by Alan Wright BSc(Hons) CEng MICE for The Planning Handbook to publish

Solve problems of water supply and water pressure in new builds and extensions.

ShowerPowerBooster pumps offer new solutions where water supply is limited. They are ideal where there is a change of use to residential and for extensions. It is also a retrofit solution if a home has existing problems with taps and showers.

Why not choose the most popular solution with over 30,000 UK Customers?

- ✓ Mains Pressure Megaflows and Unvented Cylinders
- ✓ Combi Boilers and Electric Showers
- ✓ Gravity Hot & Cold (Vented Cylinders)
- ✓ Gravity Hot & Mains Cold (Vented Cylinders)
- ✓ Fortic Tanks
- ✓ Mains Pressure
- ✓ Radiator Flow Boosters
- ✓ Amazing Heat Stores

The *simplest* way to create the *perfect* shower and tap flow
